Professional Summary:

DevOps Engineer with 7+ years managing 200+ hybrid servers (AWS/on-prem) for 600K+ users with 99.8% uptime. Expert in Linux administration, infrastructure automation (Terraform, Ansible), CI/CD, Docker, and security hardening. Specialized in cloud operations, microservices deployment for high-performance applications.

Key Achievements:

- Managed **200+ Linux servers** across cloud and on-prem for **banking, government, and US-based Fintech** clients.
- Reduced cloud costs by **30%+** through FinOps practices, auto-scaling, and resource optimization.
- Implemented **CI/CD pipelines** using **GitLab CI** and GitHub Actions, reducing deployment time by **80%**.
- **Deployed 50+** containerized applications (**Node.js, Next.js, PHP, Java**) with 3-tier architectures.
- Maintained comprehensive **SOPs, runbooks, and technical documentation** for production systems.

Professional Experience:

DevOps Engineer | SMC Labs BD Ltd. (US-based Fintech & AI company)- May 2026 - Present

- Owned full cloud infrastructure across 8 AWS accounts for Dev, UAT, Staging, Prod, and Security environments.
- Managed 20+ EC2 instances, EBS, VPC, Security groups, ECR, IAM, S3, RDS, ALB, Route 53.
- Deployed and managed 20+ containerized production applications (Next.js, Node.js) across 3-tier architectures.
- Designed CI/CD pipelines (GitLab CI) with auto-deploy to Dev/Staging and manual Prod approval using ECR images.
- Ensured zero-downtime Production releases and instant rollbacks via ECS/EKS rolling updates.
- Wrote full CI/CD pipeline code from scratch, now live in production.
- Provisioned infrastructure as code using Terraform and Ansible, ensuring reproducible deployments.
- Configured Nginx reverse proxy with SSL termination, DNS management, and multi-domain traffic routing.
- Implemented cloud security using IAM policies, KMS encryption, Security Groups, and WAF rules.
- Managed PostgreSQL/MySQL RDS instances with automated backups, read replicas, and performance tuning.
- Provided daily production monitoring and support for all deployed applications.
- Monitored system health using CloudWatch, Prometheus, and Grafana.
- Handled GoDaddy operations including DNS updates, EIP-to-domain mapping, SSL renewals, and SSL offloading.
- Implemented server and infrastructure hardening firewall, SSH, automated patching, and vulnerability scanning.
- Optimized AWS costs by 30%+ via FinOps practices, and lifecycle policies S3/AWS Backup strategies.
- Maintained infrastructure documentation and ran monthly knowledge-sharing sessions with dev teams.

System Administrator | ONODA Inc. (Japanese MNC - Smart Utility Solutions)-July 2024 – May 2026

- Managed 50+ hybrid Linux servers (AWS/VMware) with 600K+ users and full infrastructure ownership.
- Administered VMware vSphere (3 ESXi hosts + vCenter) for 50+ VMs with provisioning and migration.
- Administered and tuned Oracle and MariaDB databases, ensuring performance stability for 600K+ active users.
- Managed DNS portal for IP, domain, and server records with daily updates for new additions.
- Monitored 18 applications and databases using Prometheus, Grafana, and CloudWatch for proactive alerting.
- Deployed ELK stack (Elasticsearch, Logstash, Kibana) for centralized log collection, and custom dashboards.

- Automated patching, backups, and routine ops using Bash and Ansible.
- Secured AWS networking (VPC, VPN) and implemented KMS/SSL encryption.
- Maintained CI/CD pipelines (GitHub Actions) with automated testing and security scanning.
- Implemented DR and backup strategies using AWS Backup and Veeam.
- User & permission management, sudoers, SSH hardening, cron jobs in production Linux environments.
- Managed daily tasks using Trello and reported progress to management for timely deliverables.

Associate System Administrator | MicroMac Techno Valley Ltd. (Banking Software Provider)- Aug 2021 – Jun 2024

- Managed 100+ Linux/Windows servers across 25+ banking projects with full on-premises and cloud ownership.
- Administration of 100+ Linux/Windows servers utilizing ESXi across 25+ banking projects.
- Deployed 20+ containerized applications (PHP, Java, .NET) using Docker with three-tier architecture.
- Configured Nginx for reverse proxy and database systems for high-performance applications.
- User & permission management, file sharing, domain join, and troubleshooting for 100+ users.
- Install, configure, perform migration, & implementation optimization, and troubleshoot Database Server.
- Configured monitoring with Zabbix/Nagios and performance tuning for apps and databases.
- Diagnosed and resolved production issues across infrastructure and applications.
- Enforce endpoint security, access control, and secure configuration standards.

IT Executive (Systems & Network) | Aamra Networks Limited (ISP & IIG Service Provider)- March 2019 – July 2021 | Khulna, Bangladesh

- Provided 24/7 L1/L2 support for network and server infrastructure.
- Troubleshoot MikroTik routing, firewall, load balancers and connectivity issues.
- Monitored network traffic and server health using Nagios and Cacti.
- Assisted in maintaining ISP-grade network uptime and documentation.

Education:

- B.Sc. in Computer Science & Engineering North Western University Khulna, Bangladesh 2015 - 2019

Certifications & Professional Development:

- Red Hat Certified System Administrator (**RHCSA**)-United International University (UIU- CENTer), (2025)
- AWS Solution Architect Associate (**ASAA-C03**- CSL Training (2025)
- VMware vSphere 8.0: ICM (2V0-21.23) - CSL Training (2024)
- Cisco Certified Network Associate (**CCNA**) - Khulna University of Engineering & Technology (2019)

Core Technical Skills:

- **Cloud Platforms** AWS (EC2, S3, VPC, IAM, KMS, RDS, EKS, ECS, ECR, ALB, CloudWatch, Route53)
 - **Containers:** Docker, Docker Compose, EKS
 - **Automation:** Ansible, Bash scripting, Terraform
 - **CI/CD:** GitLab/ GitHub CI/CD (full pipeline design and implementation)
 - **Databases:** PostgreSQL, MySQL, Oracle (Backup, Replication, Performance Tuning)
 - **Virtualization:** VMware ESXi, vSphere
 - **Security:** Server hardening, SSL/TLS, firewall, WAF
 - **Storage & Backup:** SAN/NAS, Veeam, S3, AWS Backup, Disaster Recovery
 - **Web & Networking:** Nginx, HAProxy, DNS, Load Balancing, VPN, TCP/IP
 - **Linux Administration:** RHEL, Ubuntu, CentOS, LVM
 - **Monitoring:** CloudWatch, Prometheus, Grafana
-
